LESSON

The Big Green Legacy: Lesson 2

Level: Upper Primary

Instructions: Read Khalid's presentation and answer the questions.

My name is Khalid. Today, I want to tell you about mangroves in the UAE. Mangroves are special trees. They grow in salty water. They have roots that stick up out of the water!

In the UAE, there are mangroves on the coasts of Abu Dhabi, Dubai, and Ras Al Khaimah. The biggest mangrove forest is in Abu Dhabi.

Mangroves clean the water, protect the land from big waves, and give homes to animals. Many animals live in mangroves. We can see fish, crabs, and birds like flamingos. Sometimes we even see turtles!

The UAE is planting more mangroves every year. By 2030, we want to have 100 million new mangrove trees!

Mangroves are very important for the UAE and the environment. We must help protect our beautiful mangroves!

1. Would you like to visit a mangrove forest?

Yes

No

2. What animals do you want to see in the mangroves?

a) **fish**

b) **crabs**

c) **flamingos**

d) **turtles**
